DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, 9 and 14 drawn to a liquid crystal device classified in class 349, subclass 155.
- II. Claims 5-7 drawn to a method of manufacturing a liquid crystal device classified in class 349, subclass 187.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)).

In the instant case (2), the liquid crystal device may be made by a process other than by performing UV exposure using a high-pressure mercury vapor lamp.

For example, the device may be made by heat exposure or other processes that do not specifically require a high-pressure mercury vapor lamp.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
